

## Front and Rear 'Marriage' Tooling

Some vehicle manufacturers assemble their Front & Rear power train assemblies on separate tooling fixtures as shown on the right.

Others choose to install the complete power train on one single Skillet or 'Dog Bone' (Front, Rear & Prop-shaft) as shown below. CK designs and manufactures tooling for each of these configurations.

CK understands the need for flexibility in these systems and utilise 'Flipper' type designs for supports (as shown below) allowing simple and fast changeover between power train types.
